

Dynapak
Packaging & Securing Solutions Pvt Ltd

www.dynapaksolutions.com

Dynapak, a young and contemporary packaging & cargo securing solutions provider, is founded by a team with decades of strong technical know-how and experience in cargo packaging, lashing and lifting services. Using highly skilled resources we offer cost effective, customized scientific solutions suiting your packaging needs for any mode of transportation.

Professional packaging being the core competency at **Dynapak**, customer needs and challenges involved in space and size optimization of packed sizes, safe handling and transportation of cargo are addressed for shipments involving Export or Domestic cargo by Road, Air or Sea.

Dynapak provides their customers engineered total packaging and securing solutions for any mode of transportation, taking into consideration the handling, sensitivity of the cargo especially when prone to exposure to climatic changes during transit, onsite storage conditions, and challenges involved in Air and Seaworthy conditions of transportation.

Dynapak is ISO 9001:2015 certified, adopting best practices in the industry for providing engineered quality solutions meeting the expectations of their customers.

Packaging Designs

Packaging designs at **Dynapak** are engineered to meet customer requirements taking into consideration cargo load distribution, lifting and lashing provisions, with most cost effective and economic solutions provided for transportation from shop floor to shop floor

Using 3D modelling software, design solutions with lifting and lashing arrangements, are provided including strength calculations of securing arrangements, in compliance with IMO and EN Guidelines,

The type of Primary and secondary packaging is decided on providing optimum designs for container stuffing, break bulk shipments or meeting other transportation and storage challenges especially with over dimension and heavy cargoes

Conformity to packaging and transportation standards specified by customers or any National , international standards are compiled with.

Corrosion Protection

Corrosion protection, being one of the universal problems in packaging, is a niche area of specialization at **Dynapak**. Scientific preventive methods and solutions are provided during the primary packaging stage either as a direct protection mechanism using barrier material or by removing moisture from the surrounding using Dessicants to prevent moisture and other corrosive agents.

Lashings & Lifting Solutions

Dynapak provides securing and lifting solutions planned for the entire supply chain, right from the cargo design stage where this is feasible for customers, or on the packaging itself for safe lifting and securing during loading/unloading and transportation, be it by Road, Air or Sea.

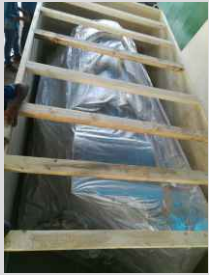

Lashing strength calculations can be provided in compliance with SOLAS Chapter VI and VII, Code of Safe Practice for Cargo Stowage and Securing, EN or other standards guidelines for shipments by Road, Air or Sea.

Vacuum Packing

Long Term Storage Solutions

Long term storage of cargo comes with uncertainty of the period of storage, exposure to unexpected adverse weather conditions. Customized solutions are offered by us suiting onsite conditions, whether it is storage on deck on-board vessels while in transit, or on site with rain, dust, sub-zero temperatures, sunlight with UV exposure etc. A combination of Shrink films, vacuum packing anti-corrosive films, Thermal liners etc., are used for providing the best solutions suited for storage location.

Dangerous Goods

Dangerous Goods packaging is a specialized area of service at Dynapak. Professional services are offered in designing and packaging solutions of Dangerous Goods, in compliance with IMDG & IATA requirements for UN testing and certification of same.

Dynapak & Sustainable Packaging Solutions

We at **Dynapak** would like to remain committed in environmental friendly solutions and therefore constantly explore alternative sustainable solutions for our existing and new customers, keeping in mind the ecological impact created by materials used in packaging. With concerns of disposal and recycling restrictions in various countries of the world, Dynapak ensures your packaging is in compliance with all such regulations any where in the world, by using only material permitted in that particular country.

While we understand that polymer based packaging material cannot be eliminated completely, no effort is spared at Dynapak in educating our work force to follow the cardinal principles of Reduce, Re-use and Re-cycle on every occasion.
